Securing your Vision

Hilgraeve Taps Secure-24 to Deploy HyperSend PDX

(SOUTHFIELD, Michigan, February 3, 2007) - Nobody wants their foot fungus test results to be public domain, nor other such leaks of personal health information (PHI). PHI is protected under HIPAA, which is a major concern for Beaumont Hospital and Doctors Laboratory Inc., both of which are customers of Hilgraeve, Inc., a long-time leader in connecting uncooperative systems.

Hilgraeve's premier product for the healthcare industry, HyperSend PDX, is the foundation for the private healthcare information networks Hilgraeve builds and maintains. A leading, secure electronic data transmission technology, HyperSend PDX reconfigures extracted data into an industry-standardized format. With a high volume of PHI exchange, Hilgraeve relies on a fully-managed hosting solution that focuses on industry compliance. Hilgraeve chose Secure-24 for its outstanding audit record and absolute adherence to the ITIL and CobiT standards and processes which make Secure-24 inherently compliant with HIPAA.

For Hilgraeve, Secure-24 will be implementing a VMWare/GFS/EMC environment. Secure-24's solution for Hilgraeve is a state-of-the-art platform for the HyperSend PDX application that applies experience in deploying complex, extremely scalable, highly available and completely secure environments.
