

Comprehensive Managed Services for Remote Offices

Simplified IT Management for Remote and Branch Offices

Many organizations have Remote Offices and Branch Offices (ROBO) with local IT infrastructure. While these remote locations may have just a few servers running a few workloads to support local needs, on average approximately 50% of company data is managed outside of the data center, introducing the challenge of managing and protecting data. With Comprehensive Managed Services for Remote Offices, business critical data, regardless of where it resides, achieves the same level of control, visibility and security as data that runs in the data center.

Key Features

- **Cloud Controls Applied to Data and Infrastructure at the Edge**
 - **Data Management at the Local Level with the Highest Security**
 - **Simplified Endpoint Management**
-

The Challenges of Managing Remote and Branch Offices (ROBO)

A rapidly growing global business climate means large organizations require multiple locations to host their critical applications. Since many businesses prefer to establish operations and manufacturing in local regions to take advantage of the unique "way of doing business", many now have Remote and Branch offices.

As more enterprises move their operations to remote locations supporting remote offices and branch offices (often called ROBOs) is tough for IT. It is expensive, resource-intensive and opens up businesses to security and disaster-related risks.

With multiple branch locations comes additional challenges for IT departments. IT teams must ensure that data is secure and operating at peak performance. The remote nature of IT infrastructures makes it difficult to manage for a variety of reasons:

- **Lack of local IT staff at remote sites or regional offices** - remote offices typically lack the IT expertise needed to manage data center platforms, storage and networking.
- **Limited IT budgets** - make it difficult to invest in hardware and software solutions for remote sites that are labor intensive to maintain.
- **Limited space at remote sites** - results in challenges to accommodate new servers.

These challenges can lead to higher costs, increased risk and decreased visibility. Additionally, failure to deliver effective IT services at remote locations can result in lost sales, dissatisfied customers, and reduced productivity.

Key Benefits

- **Reduced Costs.** Decrease capital expenses and eliminate IT labor costs at the branch.
- **Reduced Risk.** Manage critical data within our data center versus at the branch level.
- **Increased Application Availability.** Guaranteed application-level Service Level Agreements (SLA).
- **Long-term Partnership.** Highly strategic service relationship dedicated to your business.
- **Predictable Costs.** No hidden costs, with monthly service fees designed to meet your remote business needs.
- **Reduced Complexity.** Via our simplified architecture.

Simplified Remote or Branch Office Management

Picture the peace of mind knowing ALL of your data, regardless of where it resides. Utilizing our application and infrastructure expertise, we analyze your IT infrastructure and provide recommendations on the right solution to deploy to maximize value and minimize risk.

With our Comprehensive Managed Services for Remote Offices, we can move as much of your critical data to our Enterprise Private Cloud, while identifying “pockets” of systems that must run locally. We deliver location independent services through our Cloud controls to all of your data, regardless of where it resides where your users work.

Secure-24 advanced technologies that allow application hosting at the branch, while data is maintained within the Cloud. All other technologies designed to “cheat latency” requires moving applications to the Cloud which involves time consuming, risky and expensive migrations. Our solution does not require per user licensing and allows users to continue using applications without interruption.

Secure-24 Technical Experts Working for You

Secure-24 is the first Private Cloud provider to Cloud-enable technology for the sole purpose of providing managed services for business-critical applications that require branch/remote office or Public Cloud hosting.

We specialize in successful outcomes. By making every client’s IT requirements work seamlessly together, managing all systems in concert and treating each customer like our only client, we stand alone in the industry as an independent Managed Cloud Services provider.

We help organizations focus on what’s most important – clients and reducing the cost associated with managing underlying applications, operating systems and infrastructure.

When you select Secure-24 to provide comprehensive managed services for remote offices, you no longer have to spend time worrying about costly maintenance and optimization efforts.
