MANAGED IT SERVICES

Mobile Device Management

Flexible and Secure Mobile Device Management Solutions

Our Mobile Device Management helps minimize security risk and enables flexibility with a Bring Your Own Device (BYOD) policy or company-owned devices.

More and more organizations encourage employees to use mobile devices to perform their jobs. Whether the day-to-day focus is business management, marketing, sales, software development, or customer relationship management, mobile devices are proliferating in the enterprise at an exponential rate.

The evolution of mobile computing enables employees to stay connected from anywhere in the world. With our Mobile Device Management, workforces can focus on business while our teams help to ensure corporate data is secure and contained on mobile devices.

Employees have flexibility and choice of mobile devices and operating systems. Our enterprise solution supports:

Android, Apple iOS, BlackBerry, Mac OS, Symbian, Windows Mobile, Windows PC/RT and Windows platforms.

Advanced Mobile Device Solutions

For enterprises seeking additional security and functionality, we offer the following packages:

Mobile E-mail DLAP Package

Customized data loss prevention enables secure corporate e-mail and attachments. The advanced e-mail package further enables enhanced security for enterprises by restricting e-mail copy and paste capabilities to personal areas of mobile devices - providing the ability to proxy e-mail traffic and the security of Exchange, ActiveSync and OWA traffic, while preventing whitelist or blacklist devices from accessing mail servers.

Advanced Mobile Application Package

This package enables enterprises to further enhance the end-user experience with corporate applications, content repository integration and the enterprise Intranet through secure authentication and encryption. Eliminate the concern of loss of corporate data through third party applications or malware attacks against IT infrastructures by selectively allowing applications the access to corporate data.

Key Features

- Fully managed mobile device solution including 24x7x365 support

- Corporate and personal data separation

- AES 256 encrypted email on mobile devices

- Enforced security on all mobile devices

- Remote-wipe capabilities for lost or stolen devices

Key Benefits

- Minimize potential for data loss with Data Loss Prevention (DLP)

- Boost employee productivity with secure BYOD

- Meet compliance requirements and simplify audits
