Capturing Today's Value and Protecting The Future

Secure, fast and optimal enterprise application performance is crucial to maintaining a competitive advantage. Processes are becoming more integrated, yielding powerful business insight and increasing the need for reliable application hosting and managed services. Optimal performance, security and high availability are paramount to the success of any business.

Whether an organization seeks SAP hosting, SAP HANA services, operational management of SAP applications, or a remote SAP Basis services team, Secure-24 delivers customized solutions to effectively align business and technology requirements. Our SAP hosting and managed application services are designed to simplify and secure enterprise applications across the organization.

Key Features

- Highly experienced SAP consultants and Basis teams
 - Expert management of SAP upgrades, implementations, maintenance and support
 - Risk mitigation and comprehensive compliance requirements including SOX, FISMA, ITAR, HIPAA and more, including simplified SAP Disaster Recovery solutions
 - Scalable solutions that grow with your business, so you only pay for what you need
-

SAP Hosting: Delivering a Comprehensive Portfolio

We are dedicated to continuously enhancing the value of our solutions and services. We deliver world-class SAP outsourcing services for managing, hosting and maintaining enterprise applications. With a large percentage of our global clients running SAP – we have an extensive portfolio that offers insight and expertise for companies worldwide.

Our SAP Basis team and next generation infrastructure provide the performance necessary to stay agile in today's rapidly changing business environment. Our strategic partnerships with hardware platform manufacturers and resellers and system integrators, complement our managed cloud and application services for the benefit of our customers. Our alliances range from large global technology and consulting firms to specialized business partners.

Key Benefits

- High availability and performance
 - Lower TCO and predictable costs
 - Minimized risk and rapid ROI
 - Industry-leading SLAs
-

Risk Mitigation: Security and Compliance

Secure-24's world-class data centers are designed with the highest security standards and compliance. We considered the full range of security features in our design: construction standards such as concrete and steel-reinforced walls, multi-layered biometric access controls, redundancy for every component, and strict process and procedures. Your applications and data are protected over a highly secure connection that incorporates the most stringent security standards.

Our data centers are seamlessly connected to ensure redundancy and high availability. We deploy infrastructure across many environments and multiple data centers, which logically perform as if they are located in the same building. This arrangement allows Secure-24 to deploy quality assurance (QA) and development environments in one data center, while production environments reside in another data center. The end result: QA and development environments act as dynamically replicated failover or as a disaster recovery environment.
