

Managed Security Services

Managed Security Tailored to Your Compliance Requirements

Secure-24 maintains robust and vigilant approach to security for every customer across all industry verticals, as cloud computing has evolved security has become an expectation in the cloud. Secure-24 delivers enterprise security starting at the foundational physical layer, offering a holistic security management approach through the logical and application layers with options to match the strictest control.

Trust and Confidence Through Design

Staying ahead of the latest security threats can be a challenge for any IT organization. Secure-24's Managed Security Services are designed to help companies prevent security events, detect intrusion and recover quickly in the event of a security breach.

We provide the flexibility needed to address changes in security threats, technologies, and most importantly, the needs of your business. Security is our guiding design principle and we use best-of-breed technologies to manage your mission-critical information to proactively identify security threats.

Secure Cloud Services: Including in Secure-24 Hosting Solutions

- Fully tiered security zone isolation across networks: multiple customer networks by default with private (RFC1918) IP addresses
- Real-time Network-based Intrusion Detection/Prevention System (IDS/IPS) coverage at the provider edge.
- Logical network separation per customer: full logical (layer 2 and layer 3) separation per customer
- Least privilege firewall configurations: by default there is a deny all policy configured between networks with dedicated virtual firewall
- Custom firewall configurations per environment: dedicated routing instance and custom firewall rules per customer
- Volumetric DoS Mitigation for behavioral analysis against Internet threats at the provider edge
- Encrypted private MPLS backbone between Secure-24 datacenters
- Security logging and off-loading per server
- ITIL-based least privilege security access for administration
- External vulnerability scanning of Internet applications
- Up to 24 hours of compliance audit support per year
- Service provider systems protected via Threat Intelligence

Additional Security Services at-a-Glance

Secure-24 provides comprehensive depth of security as a standard. Additionally, we understand that not all data provides equal risk to your company. Protect systems with highly sensitive data with custom architected solutions for additional layers of security, options are outlined below.

Application Security Services	Application Delivery Controllers: local or Global Load Balancing and SSL Offloading for secure, scalable content delivery. Database Encryption Single Sign On Web Application Firewall (WAF)
Audit and Compliance Support	Take advantage of our team of security and compliance experts and even host your IT controls audit from our data centers. Secure-24 Customers adhere to the most stringent standards and compliance requirements, including HIPAA, PCI, HiTech, ITAR, FISMA, Safe Harbor, SOX, and IRS 1075 and many other standards.
Denial of Service (DOS)	Custom DoS + Behavioral Network Security Profile: Enhanced network security via the creation of a behavioral baseline protecting against logical service exhaustion, sophisticated attacks, and lower volume DDoS. DDoS Cloud Scrubbing: A cloud-based add-on product that provides additional redundancy for some of the most sophisticated attacks that cause a failover on the provider edge service.
SIEM as a Service	Multi-tenant SIEM: A multi-tenant SIEM as a service option with the security data from the client's environment. SIEM Management: Provide day to day management and administration of LogRhythm with the customer retaining responsibility for acting on threats.
Host-Based Security Services	Endpoint Management as a Service: keep your workforces' devices up to date with the latest security patches. Our teams will manage and deploy patches to end user desktops and keep them vulnerability free.
Threat Intelligence	Threat intelligence data as well as the security data pertaining to the client environment is analyzed real time for the detection of possible security threats.
