

SECURITY & COMPLIANCE

Managed Security Services

Integrated Security Solutions that Scale with Your Business.

With growing threats, tight budgets, increased regulatory pressure, and the need for premium security expertise, many organizations are turning to Managed Services to bridge the gap, augment IT teams, and provide around-the-clock security system monitoring and management.

Increasing threats and evolving industry and government regulations are forcing organizations to invest heavily in security infrastructure. However, many companies lack the resources, expertise, and time to address the growing sophistication of threats. NTT Managed Security Services are designed to serve as a remote extension of security teams. With a layered security approach, we help to secure enterprises end-to-end, from the network to data and application layers. Security is our guiding design principle and we use best-of-breed technologies to monitor and manage mission-critical information.

The security landscape is becoming more complex and threats more pervasive and hostile. Mobility, bring your own device (BYOD), virtualization, multi-cloud, and social media are all vulnerable entry points into an organization and can pose risks if not properly managed.

Most organizations are primarily focused on keeping systems operating at optimum performance, which consumes most of their IT department's resources. Not only do they lack the technology and security expertise to develop and maintain a high security posture, they lack the budget and time required to remain up-to-date on the numerous threats facing their organization.

With growing threats, tight budgets, increased regulatory pressure, and the need for premium security expertise, many organizations are turning to Managed Security Services to bridge the gap, augment IT teams, and provide around-the-clock security monitoring and management.

NTT Managed Security Services

Managed Security Services (MSS), provide 24x7x365 security monitoring and real-time security analytics, equipping enterprises with the insight to develop strategies to protect assets through proactive detection and rapid remediation.

Our Managed Security Services are comprehensive, advanced threat detection services built on a close partnership between our security expert teams and each client. We help businesses build the security monitoring program that is tailored to improving their security posture and achieving business and technology goals.

These enterprise services begin at the foundational physical level and include:

- System and Data Protection
- Security Monitoring
- Vulnerability Management
- Network Security
- End User Security
- Governance Services
- Deceptive Technologies
- Threat Hunting
